a'.d

aiding in the infusion of said composition into said at least one cell, wherein the concentration of said substance is greater than 30% of said composition;

- (b) contacting said at least one cell in said sample with said composition;
- (c) incubating said sample with said composition for an effective period of time and at an effective temperature; and
- (d) obtaining said at least one cell with stabilized structure and nucleic acids in said sample.
- 13. (Amended) A method for stabilizing the structure and nucleic acids of at least one cell in a sample, wherein said method comprises:
 - (a) adding to a vessel containing the sample, a composition comprising [an effective concentration of]:
 - (i) a first substance [capable of] <u>having a concentration effective for</u> precipitating or denaturing proteins, comprising at least one alcohol or ketone; and
 - (ii) a second facilitator substance [to aid] <u>having a concentration</u> <u>effective for aiding in the infusion of the first substance into said at least one cell, wherein the combined concentration of said first and second substances is greater than 30% of said composition;</u>
 - (b) contacting said at least one cell in said sample with said composition;
 - (c) incubating said sample with said composition for an effective period of time and at an effective temperature;
 - (d) obtaining said at least one cell with stabilized structure and nucleic acids in said sample.

REMARKS

Claims 1-32 are in the present application.
